**Specification**

- **Description:** Fuel Gauge
- **Part Number:** 990C0-80003/80103
- **Applications:** Suzuki Marine Boats
- **Installation Time:** 1 HRS

**NOTE:** Mounts in standard 2 1/16" hole.

**Weight:** 1 lbs

**Tools Required**

1. 3/8" Nut Driver
2. Suzuki Terminal Kit 09900-28701

---

**Important**

Please read this manual and follow its instructions carefully. To emphasize special information, the symbol `⚠️` and the words **WARNING, CAUTION** and **NOTE** have special meanings. Pay special attention to the messages highlighted by these signal words: **NOTE:** Indicates special information to make maintenance easier or instructions clear.

---

**WARNING**

Indicates potential hazard that could result in death or injury.

---

**CAUTION**

Indicates potential hazard that could result in vehicle damage.
SPECIAL CAUTION should be taken when working on or near tanks that have, or have had, fuel in them.

Be certain to use stranded, insulated wire not lighter than 18 AWG that is approved for marine use. It is recommended that you use the included color coded wire extension leads.

Cut a 2 1/16" dia hole in the dash and mount the gauge with the backclamp supplied.

If this gauge kit includes a three prong connector, slide the connector over the gauge studs. Connect the fuel tank sender wire to the signal wire. Connect the gray and black wires to the gray and black wires of the main engine harness. Proceed to step 8, otherwise go to step 5.

Connect your fuel tank sender wire to the gauge stud marked ‘S’ (signal) and secure with nut and lockwasher. Connect opposite end to the fuel level sender’s signal wire or terminal.

Connect the gray extension lead stud connector to the positive (+) post of the tachometer and plug the bullet end into the gray wire of the main engine harness.

Connect the black extension lead stud connector to the negative (-) post of the tachometer and plug the bullet end into the black wire of the main engine harness.

Connect the GREEN/ORANGE extension lead to the blade terminal adjacent to the twist-out light assembly to the positive “+” side of the instrument lighting circuit and the bullet end to the boat lighting circuit. No separate ground is required for the lighting.

Reconnect the battery.

NOTE:
To change light bulb, twist out black socket assembly one-eighth turn counterclockwise until it pops out. Bulb pulls straight out of socket assembly. It is a GE No. 161 instrument lamp.
