The FARIA MG2000 Tachometer combines the features of an ECU serial bus gateway and several instruments into one unit:

- The tachometer is analog in appearance but driven by a stepper motor for digital accuracy.
- The high resolution LCD screen displays information for many other functions and the various "screens" can be configured as the user wishes. As received, the screens are configured as shown in Fig. 1.

The MG2000 receives digital engine data from the Engine Control Unit (ECU) via the **GM ALDL** bus and can receive GPS information via a **NMEA 0183** connection to a suitable GPS unit. GPS information is displayed in the MG2000 speedometer. Analog inputs are provided for two nonengine sensors such as fuel level and oil pressure.

The MG2000 provides a Faria Bus output to allow use of various other 5, 4, and 2 inch instruments with the MG2000.

The Faria MG2000 Tachometer will turn on when the ignition key is turned on and will turn off when the ignition key is turned off. The unit will power up showing the default screen selected by the user.

ALARM SCREEN
WILL DISPLAY
ENGINE
AND LOCAL
ALARMS WHEN
THEY OCCUR

Figure 1

The instrument has three push buttons; "M" "Mode", "Down", and "Up"; that control the functions available. The "M" "Mode" button is used to change the function of the LCD display and to access submenus and adjustable settings. The "Down" and "Up" buttons are used to modify the settings.

In the "Normal" operation mode, pressing the "Mode" button and then pressing "Down" or "Up" button causes the display to cycle between the available screens (see Figure 2). Press the "Mode" button to exit the "screen selection mode" and return to "Normal" mode or do not push any buttons for 4 seconds and the current screen will stay selected and the unit will return to "Normal" mode (see Figure 3).

In the "Normal" operation mode, press the "Mode" and "Up" buttons to change to the "Edit" menus (see Figure 3 and "Edit" mode below).

Press the "Down" or "Up" buttons to cycle between the available "Edit" functions.

Press and hold the "Down" and "Up" buttons for two (2) secs to select an "Edit" function to change. Within each "Editing" function the "Down" or "Up" buttons select settings or sub-functions. Follow the instructions in the "Edit" mode section of this manual to save the new settings after you select / adjust them.

To exit the "Edit" mode after the edit is completed, press the "Mode" button to return to "Normal" mode.

Normal Mode

When the MG2000 is turned on the unit will "beep" once, flash once and then the unit enters "Self Test" mode. The screen will display "The Self Test Mode Is In Operation" for 10 seconds.

The horn will sound three times and the warning lights and back lights will flash three times. When this is complete, the software ID and revision screen will show for two seconds, then the user selected "Default" screen will appear.

Contrast and Lighting

In the "Normal" operating mode the instrument display contrast and display mode can be adjusted by pressing the "Down" <u>and</u> "Up" buttons.

With the display in "Positive" mode, black on white, pressing the "Down" button decreases the contrast. Pressing the "Up" button increases contrast.

Continuing to press the "Up" button causes the display to reverse to the "Negative" mode, white on black. The contrast in this mode is controlled the same way as the "Positive" mode.

To return to "Positive" mode, continue to press the "Down" button until the display reverses.

To adjust the lighting intensity of all of the instruments in the system, press and hold both the "Down" <u>and</u> "Up" buttons for 2 seconds. The lighting intensity may now be adjusted by using the "Down" or "Up" buttons.

Return to the "Normal" mode by pressing and holding both the "Down" and "Up" buttons for 2 seconds.

Displayed Functions

Tachometer

The tachometer is a digital instrument with the appearance of an analog instrument. The tachometer receives data directly from the ECU so no settings are required for the dial range. A microprocessor controlled stepper motor moves the pointer to display engine revolutions per minute.

Default Screen "1"

Volt 13.6 v OIL PRESSURE 27 PSI

Volts

Displays system voltage as received from the ECU (Engine Control Unit).

OIL PRESSURE

Analog input. Displays information from the analog oil pressure sender.

Default Screen "2"

Fuel Left 47 GAL Fuel Used 21 GAL Fuel Inst 11.6 GPH

Fuel Left

Displays the quantity of fuel remaining in the fuel tank based on the original quantity of fuel in the tank when full and the amount of fuel used based on the GPH from the engine ECU and the time spent at each GPH. Fuel tank size and reset are available in the "Edit" mode.

Fuel Used

Displays the amount of fuel used since reset based on the GPH from the engine ECU and the time spent at each GPH.

Fuel Inst

Displays the current, instantaneous, fuel flow in GPH.

Default Screen "3"

Engine Temp 136 °F ENG HOURS 325 Hours

Engine Temp

Displays the coolant temperature received from the ECU. Dial range can be selected in the "Edit" function.

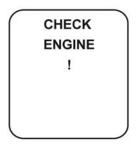

Engine Hours

Displays the Engine Hours data received from the engine ECU.

Default screen "4"

ALARM SCREEN
WILL DISPLAY
ENGINE
AND LOCAL
ALARMS WHEN
THEY OCCUR

This screen displays fault conditions based on engine data received from the ECU or alarms based on internally set alarm points. Engine alarms from the ECU will be displayed as "Check Engine!"

or "Engine Emergency Stop!".

Accessing the "View" mode when the Alarm screen appears will allow more information to be displayed about the alarm if provided by the engine.

Internal alarm values can be set for "Low Fuel" and other functions. Alarms for these settings will appear as required.

LCD Display Screens:

In "Normal" mode, press "Mode" once to enter screen "Select" mode, press "Up" or "Down" to move between screens. Press "Mode" once to return to "Normal" mode.

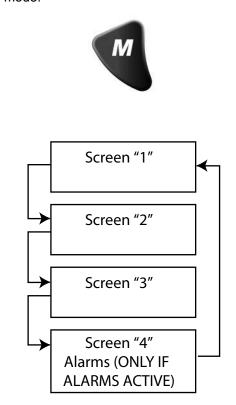

Figure 2

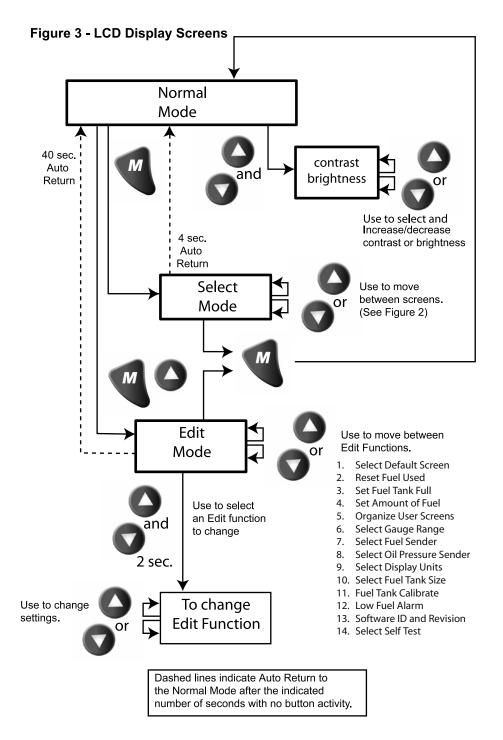

Figure 3

This page left blank intentionally.

Edit Mode

The "Edit" mode is used to adjust or set the values of numerous functions and options in the MG2000. The procedure below specifies the steps to be taken in the "Edit" mode to adjust / set each option.

To enter "Edit" mode, press the "Mode" and "Up" buttons while in "Normal" mode

To return to "Normal" mode, press "Mode" button once while in "Edit" mode.

Functions that are set or adjusted in the "Edit" mode:

- 1. Select Default Screen
- 2. Reset Fuel Used
- 3. Set Fuel Tank Full
- 4. Set Amount of Fuel
- 5. Organize User Screens
- 6. Select Gauge Range
- 7. Select Fuel Sender
- 8. Select Oil Pressure Sender
- 9. Select Display Units
- 10. Select Fuel Tank Size
- 11. Fuel Tank Calibrate
- 12. Low Fuel Alarm
- 13. Software ID and Revision
- 14. Select Self Test

Available Functions for Display in MG2000 ALDL Tachometer Screens

The functions listed below can be displayed in the user configurable screens. All of the functions may not be available in your installation. If a function is selected for display and that function does not appear on the screen, the function does not exist in this installation.

A function is selected for display by selecting "Organize User Screens" in "Edit" mode.

- 1. System voltage
- 2. Oil Pressure
- 3. Coolant temperature (Engine Temp)
- 4. Engine hours
- 5. Fuel remaining based on usage and tank volume when filled (Fuel Left)
- 6. Fuel used since last reset (Fuel Used)
- 7. Fuel consumption rate (Fuel Inst)

Alarm Mode

The "Alarm" screen appears only if an alarm condition exists. The alarm condition may be a warning sent from the engine ECU or a "Local" alarm such as "Low Fuel". When an alarm condition occurs, the "Alarm Screen" will appear and the screens described below will be displayed.

The descriptions below also explain how to temporarily override the alarm screen and audible / visual warnings and return to "Normal" mode. In all cases, the

alarm will re-occur after a period of time to ensure that the user remembers the alarm condition.

Once an alarm condition has been corrected, the alarm screen, horn, and warning lights will no longer be displayed.

Alarm Mode	LINE	DISPLAY
The "Alarm" screen will appear if a local alarm or an		
engine alarm occurs.		
The local alarm is "Low Fuel".

Harness HN0401 NMEA 0183 Cable

NMEA 2000

MG2000 Tachometer

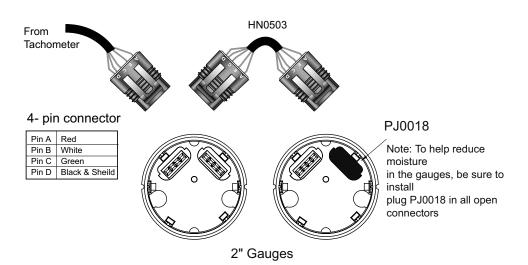

*Note:

- 1) Cut off the connector at the end of the antenna cable
- 2) Cut off the following wires because they are not used: White, Yellow, Brown
- 3) Cut wires so that they are different lengths. This ensures they do not touch each other.

Tachometer to 2" Gauge Connection

Notes:
